Holcim Awards competition

The Holcim Foundation for Sustainable Construction awards prizes for innovative, future-oriented, and tangible construction projects that go beyond convention, exploring new ways and means, and drawing attention to excellence.

In the context of the technological, environmental, socio-economic and cultural issues affecting building and construction, let it be known that from 4,774 submitted entries located in 121 countries, the following project was awarded the:

Global Holcim Awards Gold 2009

Project:

River remediation and urban development scheme Fez, Morocco

Project authors:

Aziza Chaouni, Extramuro, LLP, Fez, Morocco
Takako Tajima, Urban Studio, Los Angeles, CA, USA
Faiza Zemmouri, Faiza Zemmouri Consulting, Fez, Morocco
Marco Cenzatti, Harvard University Graduate School of Design, Cambridge, MA, USA
Alissa Reem, University of California, Berkeley, CA, USA
John Ferri, John Ferri Consultant, Los Angeles, CA, USA
Dan Brunn, Extramuro, LLP, Los Angeles, CA, USA
Vesna Kann, University of Toronto, Toronto, Canada

Prize money:

USD 300,000

a:b = (a+b):a

Theories of proportion refer to the golden section, considered by many as divine proportion. We encounter the golden section everywhere – notably in architecture and art. The icosahedron – a twelve-cornered polyhedron – is formed by three equally sized rectangles arranged at right angles to each other, sharing a common centre, and with an aspect ratio of the golden section. The icosahedron represents the objectives of the Holcim Awards for Sustainable Construction because sustainability always strives for harmony – between today and tomorrow, between resources and consumption, between needs and opportunities.
